

# On Oxygen Containing Heterocycles and Nucleophilic Organocatalysis

Prof. Dr. Ivan Vilotijevic

Friedrich Schiller Universität Jena

Abstract: The goal of this presentation is to introduce the speaker, his expertise and the current projects to the members of ChemBioSys. A brief overview of the work on (i) synthesis of ladder polyethers via epoxide-opening cascades, (ii) synthesis of glycosylphosphatidylinositols and (iii) ongoing efforts in nucleophilic organocatalysis will be presented.
